Summary

I'm a builder who fell for **Generative AI** by shipping with it, and a Computer Science student at MIT ADT University (Batch 2027). I've built a voice AI platform that speaks 22 Indian languages, an email assistant that 15+ colleagues used to write in their own voice, and voice agents that handle real customer calls. I love turning complex tech into things people use, and blogging about it.

Technical Skills

Languages: Python, C++, JavaScript, SQL
Generative AI: Prompt Engineering, RAG, LangChain, LangGraph, MCP, AI Agents, Embeddings, Semantic Search, Voice AI
Writing & Documentation: Technical Writing, Blogging, Structured Content, Developer Guides, Markdown, HTML
Vector Databases & Data: Pinecone, Qdrant, PostgreSQL, MongoDB
Frameworks & Cloud: FastAPI, Next.js, React, Node.js, PyTorch, Git, Docker, AWS, Google Cloud

Experience

Quensulting AI LLP — Pune, India
AI Voice Agents & Automation Intern — *May 2026 – Nov 2026*

- Built **AI voice agents** on Retell and Vapi that answer and make customer calls: designed call flows, wrote **agent prompts**, and tuned ElevenLabs voices so they sound clear and natural.
- Built the backend tools an agent calls mid-conversation (check availability, book, reschedule, cancel, hand over to a human) in **Python** (FastAPI), with safeguards so a repeated request never double-books.
- Automated follow-ups with **n8n**: CRM lookups, data updates and WhatsApp messages after each call.

Persistent Systems Inc. — Pune, India
GenAI Intern — *Sep 2025 – Apr 2026*

- Built **GenAI workflows** on the Gemini API (Google Cloud) that automate multi-step business processes, grounding answers in company documents with **RAG**.
- Wrote and versioned **structured prompts**, cutting token usage and response time through measured feedback.
- Worked across **Google Cloud** for model access, storage and pipeline orchestration, taking features from prototype to team use.

Projects

Auralis – Voice AI for Indian Languages | *Python, FastAPI, Next.js, PyTorch*

- Built a voice platform that **speaks 22 Indian languages** and **clones a voice in 10 languages**, using five open speech models on a single laptop with no paid APIs.
- Made the voice agent fast: first audio in **0.84 s** (down from 1.57 s) and a full reply in **3.0 s** (down from 4.7 s); it handled **733/733 requests** in a 45-minute stress test with zero crashes.
- Agents answer from your own documents: they found the right passage in the **top 3 for 97.8%** of test questions, checked against 60 tricky Hindi and Hinglish questions.
- Clones a voice only with proof of consent: a speaker check scores **0.88** for the same person vs. **0.14** for someone else, with one-click consent withdrawal.
- Every clip carries an invisible watermark and a signed receipt; **wrote the receipt specification** and Python and Node SDK guides so anyone can verify a clip offline. Backed by about **2,500 automated tests**.

Email Digital Twin – Write in Your Own Voice | *Chrome Extension, Node.js, Gemini*

- Built an AI assistant that learns how you write from **50–100 of your sent emails** (tone, formality, sentence length, structure) and drafts replies that sound like you, not like AI.
- Helped my team at Persistent Systems write emails in their own voice: **15+ members of the CTO unit** used it daily.
- Gives **four drafts per email** (formal, concise, casual, context-aware) and keeps confidential content out of outputs and logs.

DSAKarle – Algorithm Learning Platform | *Next.js, React*

- **Wrote 300+ step-by-step explanations** across **25+ topics** in data structures and algorithms, each walking a beginner through one idea at a time beside an animated diagram.
- Structured every lesson as reusable, validated content, so a new topic can be added without changing any code, plus instant search across all topics.

Education

MIT ADT University – School of Computing — Pune, India
B.Tech in Computer Science and Engineering | CGPA: 8.5/10 — *Aug 2023 – Jul 2027*

Achievements & Certifications

IBM Generative AI Engineering Professional Certificate (Oct 2026) | **AWS Certified AI Practitioner** (Nov 2026)
Winner – Cloudinary AI Hackathon 2026 (879 teams) | **Winner** – Black Pearl Hackathon 2025 | **Top 50** – VOIS 2026
